Summary

AI Full-Stack Software Engineer with experience building AI-powered applications and scalable full-stack systems using React, TypeScript, Python, FastAPI, Node.js, RESTful APIs, and Generative AI technologies.

Work Experience

Software Engineer I – Accellor July 2026 – Present

- Developing the frontend for an AI Agent Marketplace using **React**, **TypeScript**, **Redux Toolkit**, and **Vite**.
- Spearheaded the observability architecture for a FastAPI and LangGraph-based RFP document generator, integrating Langfuse to monitor cumulative pipeline costs, hybrid search retrieval steps, and multi-turn human-in-the-loop clarifications.

Software Development Executive Apprentice – Boeing India Aug 2025 – July 2026

- Developed a production-grade **.NET/WPF** desktop application using **C#** and **SQLite** to automate change-impact analysis across thousands of aircraft maintenance training records.
- Designed a high-performance data layer using **SQLite**, asynchronous programming, pagination, JSON parsing, and Excel/CSV export for responsive querying of large datasets.
- Engineered a real-time simulator monitoring and override system using **MQTTnet**, implementing a low-latency publish/subscribe architecture with thread-safe concurrent processing.
- Developed an AI-assisted grading platform using **React.js**, **Express.js**, and **TypeScript**, integrating **OAuth2**, offline synchronization, Azure cloud services, and AI-assisted evaluation workflows.

Projects

Compeer – Collaborative Interview IDE GitHub

Tools: Next.js, TypeScript, Socket.io, Y.js, Redis, WebRTC, PostgreSQL, Prisma, Docker

- Built a **scalable multi-user** collaborative IDE using **Monaco Editor** and **Y.js (CRDTs)** with real-time sync across distributed servers via **Redis pub/sub**.
- Implemented **peer-to-peer** video/audio using **WebRTC** with a custom signaling server for SDP and ICE exchange.
- Designed a **secure backend** with **JWT authentication**, **RBAC**, **PostgreSQL + Prisma**, and **Docker-based sandboxed execution**.

CI/CD Pipeline Vulnerability Analyzer GitHub

Tools: Python, GitHub Actions, Ollama, Shell Scripting

- Developed a Python-based backend to analyze **GitHub Actions workflows**, detecting **security misconfigurations** using rule-based scanning.
- Generated **structured threat reports** highlighting **vulnerable patterns** in CI/CD pipelines.
- Integrated a local **LLM (Ollama)** and **APIs** to automatically generate **remediated YAML configurations**.

Task Management System GitHub

Tools: React.js, Node.js, Express.js, MongoDB, Redux Toolkit, Tailwind CSS, JWT

- Built a **full-stack MERN** application with **role-based access control** and task lifecycle management.
- Designed **REST APIs** with **JWT authentication** and used **Redux Toolkit** for **global state management**.
- Developed a **responsive dashboard** with filtering, activity tracking, and real-time collaboration features.

Education

Indian Institute of Information Technology Dharwad **Nov 2022 – May 2026**
B.Tech in Computer Science Engineering **GPA: 8.81 / 10**

Skills

Languages	TypeScript, JavaScript (ES6+), C#, Python, C++, SQL, Bash
Frontend	Next.js, React.js, Redux Toolkit, Tailwind CSS
Backend	Node.js, Express.js, .NET, FastAPI, Pydantic, RESTful APIs, WebSockets, MQTT
Databases	PostgreSQL, Redis, MongoDB, SQLite, ChromaDB, Prisma
Systems	Distributed Systems, WebRTC, CRDTs (Y.js), RBAC, Jwt, OAuth , RAG
Tools & CS	Git, Docker, CI/CD, Vercel, DSA, OOP, Operating system, DBMS, Networks

Achievements & Certifications

- **Full-Stack Engineering Cohort(100xDevs):** Certified in advanced web development,mastering the MERN stack, Next.js, DevOps (Docker, CI/CD), and modern System Design architecture.
- **Algorithmic Problem Solving:** Solved 500+ complex coding challenges across LeetCode and GeeksforGeeks, demonstrating a strong grasp of data structures, algorithms, and system optimization.
